Omschrijving

The right glove for working in dense bushes, shrubs and undergrowth

The Shrubcare Glove in size M from GARDENA is your perfect companion when cutting shrubs and dealing with dense undergrowth in the garden. This durable gardening glove for medium-sized hands is designed with a robust material that protects you from scratches or nettle stings. The long cuff protects your wrist and lower forearm. When using gardening secateurs you will feel high-quality workmanship of the gloves. In addition, the fabric between the thumb and index finger is reinforced, as this area is often subject to particularly heavy wear and tear, meaning the glove can be used for a long time. The Shrubcare Glove offers a lot of comfort: the palm of the glove is silicone-coated, which means that secateurs not only fit securely in your hand, but cannot slip out. Even the operation of a smartphone or tablet is possible at any time thanks to the Mobile Touch function on the thumb and index finger. As the smartphone-enabled Shrubcare Glove has Oeko-Tex® Standard 100, the textiles used are free of harmful substances.

40% polyester, 35% nylon, 18% polyurethane, 5% cotton, 2% elastane
